## PIE® Medical 2006 Bowel Therapy Trolley System

Pulse Irrigated Evacuation (PIE) is a closed system that pulses warm water into the colon through a cuff speculum, hydrating the stool and allowing it to evacuate by gravity to a containment bag. The gentle pulsing water stimulates the natural peristaltic action of the colon. Inflow and Outflow is controlled and adapted to each person and application. Inflow is under low pressure, 2.5 psi. Outflow is to gravity only. At no time is material suctioned out of the person. PIE Therapy is effective enough to handle acute fecal impactions or prepare a person for colonoscopy exam and is safe enough for long-term bowel maintenance. Comes complete with one battery charger and one remote control assembly.

NUMBER	DESCRIPTION	PACK
PIEPIEP1		Each

## PIE® Medical Therapy Packs for Trolley and Accessories

Each Therapy Pack Includes: (1) B-Valve, (2) containment bags, (1) lube jelly, (1) bed pad, (1) tray liner waste disposable bag and (2) hose caps
