

## SUR-FIT Natura® Ostomy System

SUR-FIT Natura® is a trusted two-piece system with the secure snap-on, snap-off design. It provides versatility for patients to switch pouches to fit their lifestyle.

### SUR-FIT NATURA® COLOR MATCHING SYSTEM

To help you select compatible components, every box label is color-coded. First, select the proper skin barrier; then select a matching color-coded pouch ("red" skin barrier is compatible with a "red" pouch box label).

## Esteem synergy® Two-Piece Ostomy System

Esteem synergy® is a two-piece ostomy system with an innovative resealable Adhesive Coupling Technology™ that connects the pouch to the skin barrier. It provides the low-profile of a one-piece system with the versatility of a two-piece system.

### Esteem synergy® COLOR MATCHING SYSTEM

To help you select compatible components, every box label is color-coded. First, select the proper skin barrier; then select a matching color-coded pouch ("green" skin barrier is compatible with a "green" pouch box label).

### Esteem synergy® Stomahesive® Skin Barrier

Landing Zone flange with white tape collar.

## Getting a Better Fit

Using a skin barrier opening that is too large can cause skin problems. In order to ensure a more precise fit and help prevent leakage, select a skin barrier/pouch that has an opening no more than 1/8" larger than the size of the stoma. If the pouch opening size is correct, and the skin barrier isn't holding its seal for an appropriate amount of time, it may be due to gaps caused by anatomy, posture, stoma shape, or stomal location; or it may be due to a retracted (pulled-in) or flush-with-the-skin stoma.

The goal in correcting a gap or poor fit is to improve the seal so that future leakage does not occur. Troubleshooting the possible problems can frequently result in rapid improvement. It is possible to improve the seal in one or more of the following ways:

### EXACT OPENING

Measure the stoma every time you purchase supplies. Select the skin barrier with the proper opening for your stoma. Use custom-cut instead

of pre-cut skin barriers and pouches, if necessary, especially if the stoma shape is very irregular. Cut (customize) the opening in the skin barrier according to the package insert instructions.

### DIFFERENT SKIN BARRIER

Using a durable skin barrier such as Stomahesive® or Durahesive® helps minimize the number of skin barrier changes. Stomahesive® provides high-quality protection for colostomies, while Durahesive® is the product of choice for ileostomies and urostomies. Durahesive® is also the product of choice for difficult-to-manage ostomies of any kind.

### CONVEXITY

If the stoma is flush with the abdominal skin or is recessed, consider using an ostomy system with a convex disk. ConvaTec offers ostomy systems that have built-in convex disks. A disposable convex insert may be used in conjunction with a flat skin barrier. Be certain that the flange size of the convex disc matches the flange size of the skin barrier.

*Used with permission from ConvaTec.*

# OSTOMY

## ActiveLife® Ostomy System

ActiveLife® is the only one-piece ostomy system available with both Stomahesive® and Durahesive® skin barriers. Either skin barrier allows it to mold to the body contours.

### ActiveLife® Drainable Pouch with Stomahesive® Skin Barrier

Stomahesive® barrier with one-sided comfort panel and tape collar. 1 tail closure per box.
